WATER QUALITY REPORT? WHY PROVIDE A

As water travels over the surface of the land or through the ground, include rivers, lakes, streams, ponds, reservoirs, springs, and wells The sources of drinking water (both tap water and bottled water) iterial, and can pick up substances resulting from the presence of als or from human activity. Contaminants that may be present in Irally occurring minerals and, in some cases, radioactive

- livestock operations, and wildlife Microbial contaminants, such as viruses and bacteria, which may me from sewage treatment plants, septic systems, agricultural
- production, mining, or farming. industrial or domestic wastewater discharges, oil and gas be naturally-occurring or result from urban stormwater runoff, Inorganic contaminants, such as salts and metals, which can
- such as agriculture, urban stormwater runoff, and residential uses. Pesticides and herbicides, which may come from a variety of sources
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are byproducts of industrial processes ar petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.
- the result of oil and gas production and mining activities Radioactive contaminants, which can be naturally

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration regulations establish limits for contaminants in bottled water which must provide similar protection for public health.
